

H22P55

The H22P55 is all of the functionality you need for sprayer filling in a compact and cost-effective platform. The integrated transfer pump performs sprayer filling along with all of your liquid and dry handling needs; closed loop recirculation and agitation, bulk chemical induction, 10L / 20L container emptying and rinsing, direct chemical induction to sprayer. The field tested valve arrangement allows you to use it whichever way suits your application; a venturi based system that keeps the water pump free of chemical at all times, or a closed loop recirculation system for aggressive agitation and even faster chemical handling.

The H22P55 comes standard with Polywest's proprietary dual-inlet venturi. This allows the venturi to draw from the Handler tank or from a bulk chemical container without any extra plumbing or hoses.

FEATURES AND BENEFITS

- Full 10L/20L container emptying and rinsing capabilities.
- Comes with The Handler knife.
- Closed loop recirculation.
- Venturi with Handler and bulk draw capabilities.
- Tank can be emptied via the venturi or via direct pump draw.
